Connectivity

We support your expansion in LATAM, bringing your content closer to your customers with high-availability and low-latency infrastructure, and the support of an expert team, so you can focus on achieving your business objectives in a growing region.

Ethernet
Dedicated data transport, supported by MPLS networks that offer the reliability, Agility and latency your business needs.

Wavelenght
Dedicated data transport over high-capacity optical networks using DWDM technology that guarantees the constant growth and neutrality that the clients' business needs

Spectrum
Activate large connectivity capacities on 100 or 200Gbps Broadband Lambdas, over the InterNexa's illuminated or equipped optical fiber infrastructure that supports 50/100GHz tunable channels and is compatible with the ITU-T for DWDM

IP Transit
Internet for OTT and CDN clients who require a dedicated service with high-speed connection to the USA and interconnection with local providers in each country to access the Internet cloud.

IP Transit Local
Efficiently distribute your traffic to the operator networks and traffic exchange points in each country where InterNexa has a connection, without incurring additional complex logistics and legal processes. This allows end users to efficiently access their networks and ensures a better user experience for their content, while also ensuring that their content is available in each country.
